

Development Updates for 2024

Kingdomverse 2024 Strategic Roadmap

As we look ahead to 2024, Kingdomverse is committed to staying at the forefront of innovation and delivering unparalleled experiences to our community. Our strategic roadmap focuses on key areas to shape the future of Web3 gaming:

NFTs Integration

Q1

Expand our NFT gaming offerings to provide players with unique in-game assets and experiences by enabling our games to integrate other NFTs through strategic collaborations allowing us to onboard other NFT communities into our projects.

Scalability Solutions

Q2

Build in scalable solutions such as Layer 2 solutions like opBNB to improve transaction speeds, reduce costs, and ensure a smooth and seamless gaming experience for all Kingdomverse users.

Premium Tournaments Platform

Q3

We are enhancing our Tournaments by building a tournament platform where holders of \$KING and NFTs from KV can stake and redeem tickets that can be used in premium tournaments with higher prize pools which can attract more users to join our ecosystem.

Play-to-Earn models expansion

Q4

We will be expanding our play-to-earn models, offering players the opportunity to earn rewards by participating in a new treasure hunt type game, completing tasks, and contributing to the Kingdomverse ecosystem, driving increased engagement and user retention.

NFT Integration Expansion

At Kingdomverse, we are dedicated to revolutionizing the gaming experience through the integration of non-fungible tokens (NFTs) in our games such as Defend the Kingdom. In 2024, we are taking a bold step forward by expanding our NFT gaming offerings to provide players with unparalleled experiences.

Through strategic collaborations with NFT projects and communities, we aim to enhance our games by enabling the integration of a diverse range of NFTs. By onboarding other NFT communities into our projects, we are creating a vibrant ecosystem where players can access a wide array of unique and collectible assets, enriching their gameplay experiences like never before.

Our vision is to break down barriers and foster a seamless integration of NFTs within Kingdomverse. By opening our doors to other NFT communities, we are not only expanding our offerings but also creating a thriving open community.

Scalability Solutions: Bridging \$KING to opBNB

At Kingdomverse, we are committed to optimizing the experience for our users by implementing scalable solutions that enhance performance and efficiency. In 2024, we are focusing on integrating Layer 2 solutions, such as opBNB, to elevate our platform and provide a way to perform affordable and fast transactions.

By leveraging Layer 2 solutions like opBNB, we aim to address the challenges associated with transaction speeds and costs on the blockchain network. These solutions enable us to offload transactions from the main chain, significantly improving scalability and reducing congestion, ultimately leading to faster and more cost-effective transactions.

The transition of \$KING from Ethereum to Opbnb represents a significant milestone for Kingdomverse. It underscores our commitment to enhancing user experience, lowering barriers to entry, and providing tangible value to our community. We are confident that these changes will foster a more vibrant, inclusive, and engaging ecosystem for all our users.

Benefits of bridging \$KING to opBNB

1. Lower Transaction Costs for Users

By leveraging Opubnb's efficient processing capabilities, we significantly reduce the cost of transactions. This makes participation in the \$KING ecosystem more affordable, encouraging more frequent transactions and interactions within our platform.

2. Lower Entry Barriers, Broader Audiences

The transition to Opubnb is expected to lower the entry barriers for new users, making it easier and more appealing for a broader audience to buy and spend \$KING. This inclusivity supports our goal of expanding our community and enhancing the liquidity of \$KING.

3. Web Shop Migration

Concurrent with the bridging process, our web shop will migrate to the Opubnb platform. This move ensures a smoother, more cost-effective shopping experience, allowing users to utilize \$KING with greater efficiency and ease.

4. Feasibility of Token Staking for Lower Quantities

The reduced transaction costs on Opubnb make token staking viable even for smaller quantities of \$KING. This inclusivity ensures that more members of our community can participate in staking, regardless of the size of their holdings.

5. \$KING Staking Program on Opubnb

In conjunction with the bridge to Opubnb, we are thrilled to introduce the \$KING Staking Program. This initiative allows players to stake their \$KING tokens on the Opubnb network and gain valuable in-game benefits, such as tournament passes. Participants can compete in our monthly tournaments, with higher prize pools than free tournaments.

Play-to-Earn Premium Tournaments

At Kingdomverse, we are dedicated to creating dynamic and rewarding experiences for our community members. In 2024, we are taking our Tournaments to the next level by introducing a cutting-edge tournament platform that offers exciting opportunities for \$KING token holders and NFT owners from Kingdomverse.

Our tournament platform will allow holders of \$KING tokens and NFTs from Kingdomverse to stake and redeem tickets, granting them access to premium tournaments with elevated prize pools. By incentivizing participation through staking mechanisms, we aim to attract more users to our ecosystem and create a competitive and engaging environment where players can showcase their skills and compete for coveted rewards.

\$KING

Premium Tournament tickets / passes

Holders of Gen3 MK NFTs and DTK Genesis NFTs will be able to stake their NFTs and/or \$KING tokens in order to yield tournament tickets/passes that can be used to participate in premium tournaments with high prize pools.

Premium Tournaments

Premium tournaments will have much higher prize pools than free tournaments. The tournament formats can be PVP and PVE.

Stats from our last DTK tournament

In January 2024 we launched the first free tournament of the year, the tournament lasted for 7 days from January 25th until January 31st UTC with very promising results, we noticed growth in new countries, such as in North America in the United States and South America in countries such as Argentina, Venezuela, Colombia and Brazil.

We are committed to keep hosting tournaments as they attract new users from all over the world and at the same time it keeps existing users engaged with the game.

New Kingdomverse Web Game – Kingdom Quest

Kingdomverse Treasure Hunt game concept art

In addition to enhancing our Tournaments, we are expanding our play-to-earn models by introducing a new treasure hunt game that rewards players for completing tasks and contributing to the Kingdomverse ecosystem. This innovative approach not only drives increased engagement but also promotes user retention by offering tangible rewards for active participation. The new web game will be built using opBNB in order to decrease gas costs and an improved performance on transactions. The game will run in a web browser making it accessible to anyone who wants to play the game, no installations and no high-end computer hardware is required.

Through these initiatives, we are fostering a vibrant gaming community where players can earn rewards, compete in thrilling tournaments, and immerse themselves in a world of endless possibilities within Kingdomverse.

Thank You.
